Warning & Attention

Remote supervision, alert management and documenting actions never have been easier.

The solution is ideal for fleets with centralized call center and third-party out-of-hours monitoring services.

It works in combination with remote access panic alarms (panic button), e-call solutions and a broad range of sensors. Furthermore, reports configurable to precise business use are generated.

The application enhances the security of assets, trailers and containers or vehicles by using automated geo-fencing, door switches or motion sensors to detect and alert of unauthorized movements, usually indicating theft.

Additionally, the application provides 24hr centralized monitoring of remote workers and business assets. It also provides real time alert notifications, a permanent record, audit trails of all actions taken and escalation procedures.

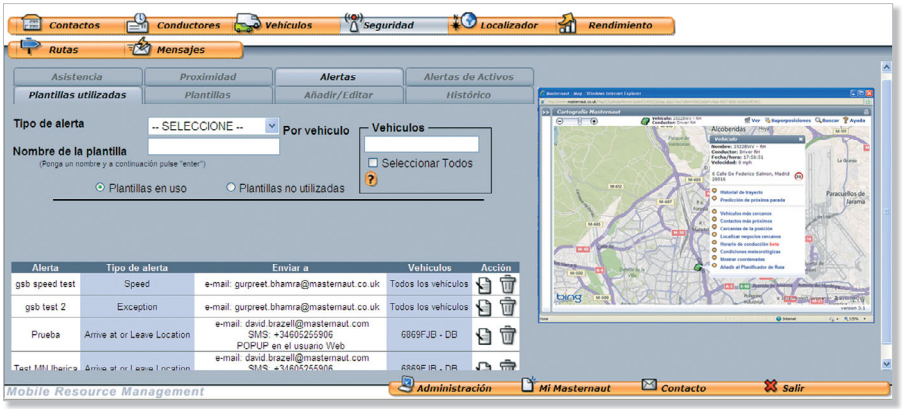
Characteristics

- Automated asset movements and out-of-hours monitoring through web portal.
- Web application that provides configurable alert notifications and full documentation for escalation audit procedures.
- Broad range of devices from in-cab to standalone panic buttons.
- Security accreditation of associations across Europe for location and recovery of stolen assets.
- eCall services for rapid reaction and direct call center contact in case of emergencies.

Benefits

- Round-the-clock protection of a mobile workforce and business assets.
- Individual configuration based on the company's needs.
- Possibility to locate stolen assets.
- Permanent record of procedures taken and the results, making them available for possible audit processes.
- Proactive management of health and safety procedures.

Application Features



- Gives access to information necessary to protect employees and assets by using configurable alerts and alarm systems (panic button).
- Managed alert chains by text, email, direct dial.
- Last known location alerting based on timeframe or inactivity.
- Employee speeding information (by Road-Speed in certain geographies).
