Managed Connectivity

# Cm2m Managed Connectivity, a complete vision for M2M communications

Thursday, 14 June 2012

M2M connectivity is always behind every M2M successful solution, from Fleet Management to Smart Cities. No matter the field we have to consider.

Understanding what M2M Managed connectivity is and what we can achieve by rolling out this kind of solutions is key to make the most of it for our business.

**The road to improvement lies on automation…**

Of course it does, but not only on automation. Presently beside working in order to produce, it is essential to continuously innovate in order to either survive or improve the business. Achieving automation of business process provided by an M2M connectivity solution is a good starting point. But your business needs more: fully controlled automation is our proposal.

Assuring that critical information for your business is transmitted in order to obtain a complete and precise vision of operative business processes is key when we talk about this kind of solutions.

An m2m Managed Connectivity solution facilitates communications management and control of your deployed machines. The customer will get connectivity for M2M lines in order to fulfill his needs: process monitoring, asset control and production, and management of the devices. All of this without dealing with the technical complexity of these solutions.

Our solution is simple and flexible since it adapts easily to different business models and can be integrated into any existing system. But most of all, it is complete because it comprehends all relevant aspects related to M2M communication.

**Telefónica's solutions**

Telefónica m2m Managed Connectivity solution has undeniable benefits. First of all, our advantaged positioning in the communications' sector allows us to offer global coverage with an m2m SIM. Furthermore, our networks are designed and optimized for M2M technology, uniting flexibility and security.

Finally, technical and strategic consulting provided by our experts allows the customization of the solution according to your business needs.

From the product perspective, Telefónica offers one of its m2m managed connectivity solutions in partnership with Jasper Wireless, providing a global M2M product that allows the intelligent, remote and real time management of all connected lines through a Control Center.

The Telefónica Control Center makes simpler all the task our customers need to perform regarding their M2M lines: automatic provisioning without manual processing, full customer control, customized to fulfill their business requirements, exhaustive tracking with full technical and economic monitoring as well as technical diagnosis tools.

We also provide our customers with a simple tool to experience the product. It's a plug and play trial with a full Telefónica's product taste.
